Practical Exam in CS 101

Importing a dataset The mtcars dataset contains information about various car models, including variables such as mpg(miles per gallon), cyl(number of cylinders), disp(displacement in cu.in.), hp(horsepower),drat(rear axle ratio), wt(weight in 1000 lbs), qsec(1/4 mile time), vs(engine where 0 = V-shaped, 1=straight), am(transmission where 0=automatic,1=manual), gear(number of forward gears)

1. Load the mtcars.csv dataset into the R environment. Show your answer.

```
save(mtcars, file = "mtcars.csv")
load("mtcars.csv")
mtcars
```

```

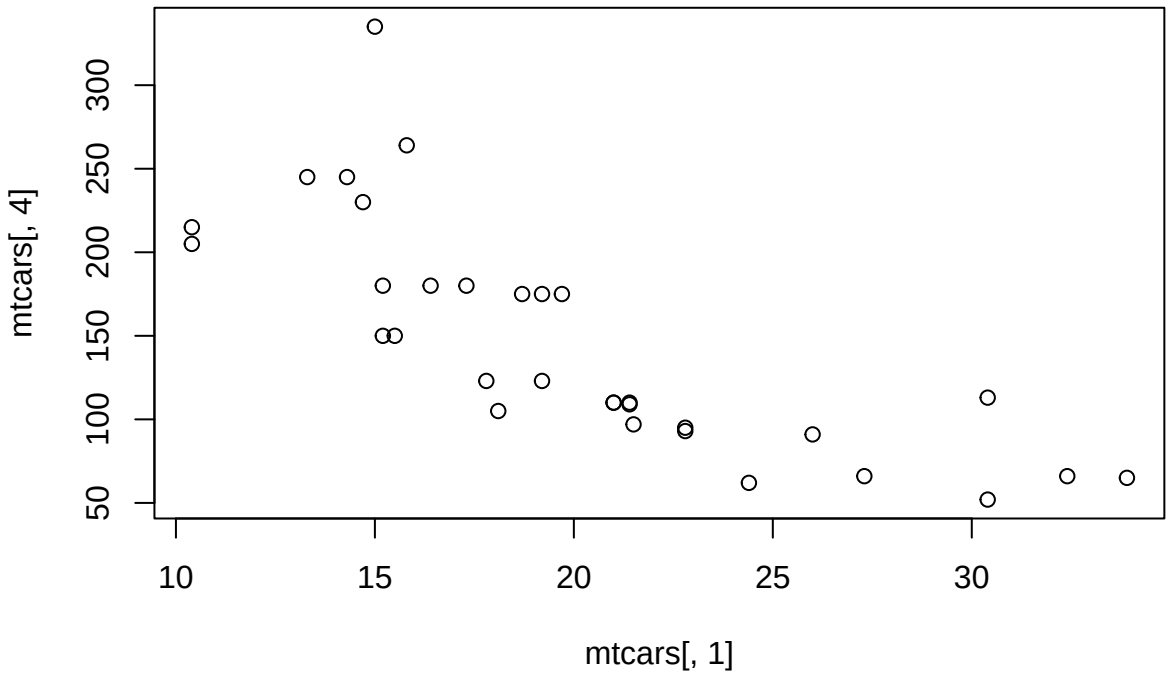
8. Visualize the relationship between the miles per gallon and the horsepower? Show your solution and describe the generated scatter plot.

```
plot(mtcars[,1],mtcars[,4])
```



9. From the newCar dataset, create a boxplot for the number of cylinders(x axis) and the horsepower(y axis). Show your solution and describe the generated box plot.

10. Create a pie chart to represent the portion of the car models with different numbers of cylinders. Show your solution.

```
specs<-table(mtcars$cyl)
